

Fully Automatic Lifts

Lifts are used for automatically transferring items to overhead conveyors or between floors. It is very common that in a large installation or production line that products are conveyed between machines on overhead conveyors. This allows personnel good access to machines and equipment situated on the factory floor. Our lifts solve the problem of moving products between the two levels. Our lifts have a narrow cross section which allows them to be situated in the most restricted spaces. Two types of lift are available. The single lift (shown above) which can cycle on demand for individual items and the continuous lift which is suitable for higher transfer rates.

The following pages show only a small selection of the large range of modules available. For more information please contact our sales department on 01252 369800.
